# Android App Developer Evaluation Task

## Goal »

Please build an app which retrieves and displays the list of items described in the data provided by **Content List Endpoint** below. When an item in the list is tapped the app should transition to a detail view which displays the same specific item data together with the additional data provided by the **Content Detail Endpoint**.

## Requirements »

- Please make assumptions regarding task details.
- Please feel free to use any frameworks provided by Android and/or the ones listed below if required for your solution but no other third party frameworks
  - Retrofit
  - GSON
  - Dagger/Dagger2
  - RxJava/RxKotlin
  - Room
- Please use either Java or Kotlin.
- The app should support Android 5.0 and up.
- Please respond with a zip containing a Gradle based project and a rough estimate of time spent.
